Professional Summary

Final-year B.Tech (AI & ML) student with solid expertise in data structures, algorithms, and system design fundamentals. Experienced in building scalable backend services, optimizing database queries, and implementing efficient problem-solving approaches in Java and Python. Adept at handling ambiguous problems and translating them into structured, high-performance solutions.

Skills

- Languages: Java, Python, C
- Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems
- Backend & Testing: REST APIs, Django, FastAPI, Selenium WebDriver, TestNG, JUnit
- Databases: SQL, MongoDB
- Tools: Git, Maven, Postman, Eclipse/IntelliJ
- Concepts: Page Object Model (POM), Test Automation Frameworks.

Projects

Smart Parking System

- Designed and developed 10+ RESTful APIs for parking slot booking, occupancy tracking, and real-time availability, improving booking response latency by 30% through optimized validation logic.
- Architected a modular backend system with structured exception handling and well-defined API contracts, improving maintainability by 40% and ensuring consistent performance.
- Implemented automated integration tests covering 90% of critical transaction workflows, reducing API-level defects by 45% prior to deployment and improving overall system reliability.

E-Commerce Test Automation Framework

- Built a Selenium WebDriver automation framework using Java, TestNG, and Page Object Model (POM), automating 30+ end-to-end e-commerce workflows and reducing manual regression testing effort by 60%.
- Achieved 85% coverage of critical user flows (login, search, cart, checkout), reducing defect leakage during testing by 40% and improving release confidence. Integrated Allure/Extent reports with automatic failure screenshots and logs; used Git and Maven to enable structured builds and automated test execution, cutting debugging time by 50%.

Internship Experience

AI/GenAI Intern – SNS iHub (Oct 2024 – Dec 2024)

- Integrated AI/GenAI models with backend services by designing RESTful endpoints and preprocessing pipelines, improving API response performance by 25% and reducing data inconsistencies by 30%.
- Contributed to feature design and production issue resolution in Agile sprints, accelerating release cycles by 20%.

AndroidApp Development Intern – Cognifyz (Mar 2024 – Apr 2024)

- Developed an Android application with secure authentication and REST API integration, improving backend communication efficiency by 30%.
- Applied modular architecture and structured testing, reducing functional defects by 40% before deployment.

Certificates

- AWS Cloud Practitioner Essentials
- Microsoft Azure AI Fundamentals

Education

B.Tech – Artificial Intelligence & Machine Learning

SNS College of Technology, Coimbatore
CGPA: 8.24 | 2022–2026
